

Specifying and ordering the Unitrol Solution® Welding Control is as easy as using it.

Just follow these easy steps to select a SOLUTION® that matches your welder:

1. Find the **primary voltage** of your welder in the **red** area of the chart below.
2. Move **downward** from this **primary voltage** and circle the blue box that includes the KVA as shown on the nameplate of your welder.
3. From this point, move to the **right** for the SOLUTION® Model Number in the column that lists the desired **circuit protection** and **cabinet style** (see photos at right). Note that circuit breakers are recommended for most production welding systems.

EXAMPLE: The correct single phase SOLUTION® controls with circuit breaker protection for a 50 KVA spot welder working at 460 volts are: #9180-810, 9180L-810, or 9180D-810 (depending on desired cabinet style).

4. Order this model number from your authorized Unitrol representative or distributor who will recommend control options. All components are carried in factory stock for fast delivery. We can usually handle one day emergency control needs for "down" situations.
5. Now get ready for the most unbelievable experience in resistance welding control today!
